

In the event of a major earthquake in the Imperial Valley or along the San Andreas fault, Yuma will be affected one way or the other, either by the quake itself, or by refugees and the injured from Imperial County. Freeways may be damaged, there may be broken water and gas lines, there may be no power. The better we **prepare and protect** ourselves, the faster our community will be able to recover and the better we will be able to help our neighbors to the West. It's not a matter of "if", but a matter of "when".

This year, California, Washington, Oregon, Nevada, Utah, British Columbia, Arizona, the Southeastern United States, and even Southern Italy are participating in the ShakeOut earthquake drill. The Great Arizona Shakeout is an opportunity to look at your personal earthquake preparedness as well as practice the actions that will protect yourself and your loved ones in the event of the "big one".

Please sign up today and participate!! As long as you do the drill within a two week period of the official Shakeout on October 18th, you will be counted, but you have to sign up!! www.shakeout.org/arizona

Here's some information of protecting yourself during a quake:

Federal, state, and local emergency management experts and other official preparedness organizations all agree that "Drop, Cover, and Hold On" is the appropriate action to reduce injury and death during earthquakes. The ShakeOut is our opportunity to practice how to protect ourselves during earthquakes. This page explains what to do-- and what not to do.

PROTECT YOURSELF. SPREAD THE WORD.

www.dropcoverholdon.org

Official rescue teams who have been dispatched to the scene of earthquakes and other disasters around the world continue to advocate use of the internationally recognized "Drop, Cover and Hold On" protocol to protect lives during earthquakes:

- **DROP** to the ground (before the earthquake drops you!),
- Take **COVER** by getting under a sturdy desk or table, and
- **HOLD ON** to it until the shaking stops.

**Los Angeles County Firefighters demonstrate
Drop, Cover, and Hold On**

If there isn't a table or desk near you, drop to the ground in an inside corner of the building and cover your head and neck with your hands and arms. Do not try to run to another room just to get under a table.

These are general guidelines for most situations. Depending on where you are (in bed, driving, in a theater, etc.), you might take other actions, as described in *Recommended Earthquake Safety Actions* ([PDF](#) | [RTF](#)).

Learn about Drop, Cover, Hold On from
MySafeLA.org

The main point is to not try to move but to **immediately** protect yourself as best as possible where you are. Earthquakes occur without any warning and may be so violent that you cannot run or crawl; you therefore will most likely be knocked to the ground where you happen to be. You will never know if the initial jolt will turn out to be start of the big one. You should Drop, Cover, and Hold On immediately!

In addition, studies of injuries and deaths caused by earthquakes in the U.S. over the last several decades indicate that you are much more likely to be injured by falling or flying objects (TVs, lamps, glass, bookcases, etc.) than to die in a collapsed building. *Drop, Cover, and Hold On* offers the best overall level of protection in most situations.

As with anything, practice makes perfect. To be ready to protect yourself immediately when the ground begins to shake, practice Drop, Cover, and Hold On as children do in school at least once each year.

What NOT to do:

DO NOT get in a doorway! An early earthquake photo is a collapsed adobe home with the door frame as the only standing part. From this came our belief that a doorway is the safest place to be during an earthquake. In modern houses and buildings, doorways are no safer, and they do not protect you from flying or falling objects. Get under a table instead!

DO NOT run outside! Trying to run in an earthquake is dangerous, as the ground is moving and you can easily fall or be injured by debris or glass. Running outside is especially dangerous, as glass, bricks, or other building components may be falling. You are much safer to stay inside and get under a table.

DO NOT believe the so-called "triangle of life"! In recent years, an e-mail has circulated which has recommends potentially life threatening actions , and the source has been discredited by leading experts. [Read our special report](#) to learn more.
